

iku® windows - the intelligent self-cleaning glass facade Spider system

Spider glass facade systems are increasingly intended for use also as a “second skin facade”.

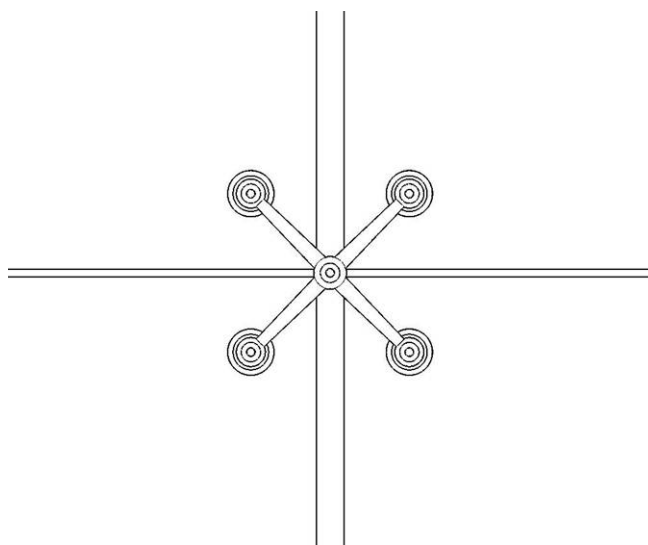

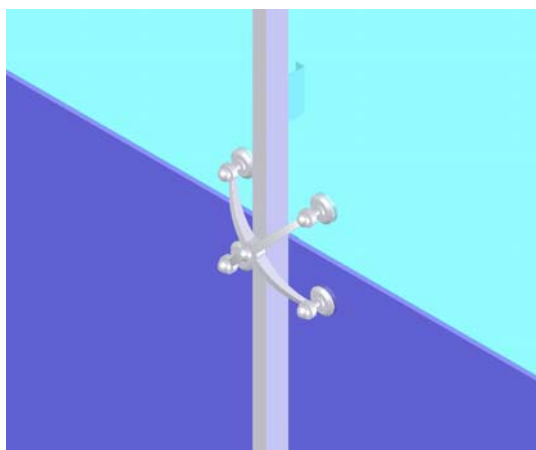

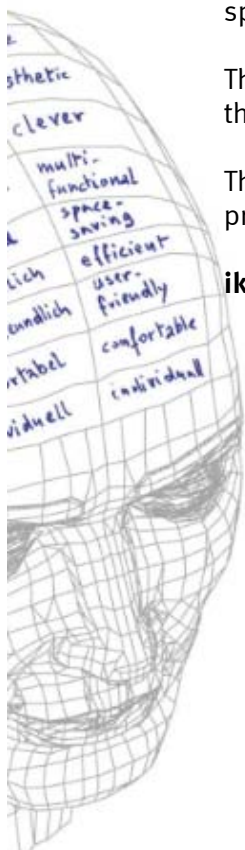

The cleaning issue is a particular challenge in these cases.

iku® windows has developed a system that solves the cleaning problem for a number of different spider facade systems.

This special technology is based on the tried and tested cleaning system that is incorporated in the iku® cover cap systems, iku® SG facades und Unitized facades.

This technology, too, benefits from the iku® techniques in the same way as all other iku® products.

iku® will be pleased to suggest solutions on the basis of any project plans.
